Preface

As evidenced by the current SARS-CoV-2 coronavirus pandemic, active research in the field of infectious microbes and related diseases is clearly crucial. We are at the forefront of this research at ‘Infectious Disorders - Drug Targets’ (ID-DT) by publishing many key research and review articles related to the fields of viruses, bacteria, parasites, and fungi. Accordingly, I would like to thank the researchers and clinicians for their outstanding and vital contribution to solve the current and long-term health crisis linked to SARS-CoV-2 infection. I encourage researchers and clinicians worldwide to submit their most important works to ID-DT, which publishes research and review articles, letters, clinical trials, and (guest-edited) thematic issues on the various aspects of microbes: origins, types, transmission, pathogenesis, epidemiological, clinical and genomic characteristics. We are, therefore, looking forward to receiving your next article submissions. I wish you, as well as the whole team of the journal ID-DT and Bentham Sciences Publishers, a healthy, happy, and prosperous new year 2021.

Dr. Jean-Marc Sabatier
